SOLVEFORCE

WHAT IS UCaaS?

UCaaS refers to a phone system that uses Voice over Internet Protocol to provide a Cloud based phone system for businesses. Often this service is provided by a network service provider as part of an overall network solution.

Voice and Telephony

UCaas aims to eliminate the common problems that companies face when keeping people connected.

Video and Meeting Solutions

The Cloud ensures that your employees do not need to work in the same building to collaborate on projects together. It is possible to share files, host conversations and meetings, and launch presentations from a computer, tablet, or smartphone.

Presence

Services integrated into your UCaaS technology can provide access to any form of messaging.

Mobility and Apps

Instant messages, voicemails, transcriptions, and social media chats create workplace efficiency when used correctly.
